

Rectangular tubes with rounded corners

Rechteckrohre mit gerundeten Ecken

13

Notes:

* The weight of each profile is calculated by measuring its cross-sectional area and multiplying it by the material density. The aluminium density is considered to be 2,70 gr/cm³.

** Alloy and Length is subject to customer's request.

*** Radii less than 1mm are not stated.

A=Height

B=Width

t=thickness

r=Corner radius

EXPERTS IN ALUMINIUM™
