

T-Profiles

T-Profile

06

Notes:

* The weight of each profile is calculated by measuring it's cross-sectional area and multiplying it by the material density. The aluminium density is considered to be 2,70 gr/cm³.

** Alloy and Length is subject to customer's request.

*** Radii less than 1mm are not stated.

A=Width

B=Height

t=thickness

r=Corner radius

EXPERTS IN ALUMINIUM™

Profile Code	A Width (mm)	B Height (mm)	t thickness (mm)	Additional charge	Area Flaeche (mm ²)	Weight Gewicht (Kg/m)
